

Leveling  
Glides

# Square One | Indiana FURNITURE

## Assembly Instructions LEVELER KIT

### Tools Needed:

Drill

6mm Allen  
Key  
Driver Bit

Flat Screw  
Driver

1 Installer

- 1 To install the Leveler Kit, first verify parts, including two levelers, two cap nuts, and two insert nuts.

It is recommended to install leveling glides prior to the full assembly of your Square One configuration.

(Square One allows for either a leveling glide or floor mount. If a floor mount is required, please check with local codes and the building's facility manger regarding floor mounting requirements.)

- 2 Insert the threaded Insert Nut into the counter sunk through hole using an allen key or drill. Make sure Insert Nut is not sticking out into counter sink areas.
- 3 Once insert nut is set, insert the threaded Leveler into the same hole on the opposite side of the block. The Leveler should easy screw into the threaded insert. There is an flat area to use a wrench if necessary.
- 4 Once the Leveler is installed, use the flat screw driver to adjust, then add the Cap Nut into the opposite side of the glide. Note: Glide can be adjusted using a wrench once the entire Square One configuration is setup.
- 5 The Leveler should be securely installed.
