Indiana Furniture Launches Antimicrobial Finish ***Company to Utilize Antimicrobial Finish on All Products***

Jasper, Indiana - April 26, 2010, Indiana Furniture, a leader in the contract furniture market is raising the bar for antimicrobial protection with the introduction of "AMP" as part of its day to day finishing operation. AMP protection with the infusion of Silver Ion technology works continuously to inhibit the growth of mold, mildew, fungus and bacteria on wood surfaces, as well as odors caused by bacterial growth, by 99.94%.

The new AMP technology uses silver ions infused into the finish top coat for antimicrobial protection on all exposed wood surfaces. On unprotected surfaces, bacteria can double in number every 20 minutes. AMP antimicrobial technology works 24/7 to inhibit the ability of microbes to reproduce, making it ideal for wood products. This added level of protection extends the longevity, integrity and appearance of the coated surfaces.

Bret Ackerman, CEO states, "We have seen in the US that all markets are re-organizing strategies to make infection control a high level of priority." Ackerman also added, "The introduction of AMP will provide Indiana Furniture a unique advantage in delivering a superior solution in helping organizations curb the spread of harmful microbes, but more importantly, will allow Indiana Furniture to deliver products that must meet even higher customer expectations."

About Indiana Furniture

Indiana Furniture, headquartered in Jasper, Indiana for over a century is committed to providing its customers with office furnishings of the highest standards in quality and craftsmanship. Through advanced information systems and state of the art technology we deliver a wide range of environmentally conscious products, styles, and sizes at competitive prices.
